

SLA improvements

By Beng Ren Siew

Overview

The dataset is a collection of helpdesk tickets that displays problems/incidents and request for software and IT. The primary goal is to provide timely solutions to the problem for each ticket.

The Service Level Agreement (SLA) is defined as the specific deadlines and expectations for handling customer issues and support request. Generally, refers to the response and resolution time.

The presentation is about possible recommendations and improvement on support to fulfil the SLA.

Improvements

1. Efficiency and Personnel

There are currently a total of 6 people across 7 teams that manage the different incident/ problems and requests. Each person is a part of multiple teams.

2. Educate and implement SLA into workflow

SLA standard is currently not implemented into workflow and therefore personnel follow due dates provided on the ticket.

Personnel

Total Tickets per Team	Agent Assigned						
Count of Team Assigned							
Row Labels	Jared Smith	Jose Satary	Mark Jikkins	Raya Musk	Satya Prakash	Stellar Murad	Grand Total
AWS Team	15			1			16
BPM - ProcessMaker Support Team	1					1	2
Hardware Team		1				1	2
Help Desk Team	13	2		15		5	35
JDE Support Team	206	9	7	12	6	6	246
Network Team	24			3		9	36
Salesforce Team	7						7
SAP Support Team	157	4	2	7	11	7	188
Workday Team	1					3	4
Grand Total	424	16	9	38	17	32	536

This table shows all the teams and personnel that work to close the helpdesk tickets and how many ticket each person takes on in each team

Efficiency

Shown in the Pie chart :

- JDE Support team handles 45.90% of tickets
- SAP Support team handles 35.07%

Efficiency

Amount of tickets Jared Smith deals with in total in each team compared to the overall tickets in each team.

Total Tickets per Team		
Count of Team Assigned		
Row Labels	Jared Smith	Grand Total
AWS Team	15	16
BPM - ProcessMaker Support Team	1	2
Hardware Team		2
Help Desk Team	13	35
JDE Support Team	206	246
Network Team	24	36
Salesforce Team	7	7
SAP Support Team	157	188
Workday Team	1	4
Grand Total	424	536

Based on the overall tickets 536 and Jared Smith's total tickets 424, he takes on 79.10% of all tickets in the dataset.

Efficiency

Of the two teams, Jared Smith is taking on the majority of the ticket: 47.47% of JDE and 36.18% of SAP

Total Tickets per Team		
Row Labels	Count of Team Assigned	% Ticket per team assigned
JDE Support Team	246	56.68%
Jared Smith	206	47.47%
Jose Satary	9	2.07%
Mark Jikkins	7	1.61%
Raya Musk	12	2.76%
Satya Prakash	6	1.38%
Stellar Murad	6	1.38%
SAP Support Team	188	43.32%
Jared Smith	157	36.18%
Jose Satary	4	0.92%
Mark Jikkins	2	0.46%
Raya Musk	7	1.61%
Satya Prakash	11	2.53%
Stellar Murad	7	1.61%
Grand Total	434	100.00%

Table showing all tickets assigned to JDE and SAP support teams only

Efficiency

Suggestions and improvements:

- Spread the distribution of tickets among the other team members to handle
- If lacking in experience:
 - > Provide adequate knowledge transfer / training for ticket scenarios
 - > Senior should provide a well documented and clear SOP for less experience personnel
- If current workforce is insufficient, it is recommended to potentially hire more personnel to handle the helpdesk tickets

Educate and Implement SLA into Workflow

To implement SLA, we have to educate all current personnel that handles helpdesk tickets on the SLA standards

Currently all personnel follow the due date provided for the tickets which does not strictly follow SLA standard which is based off the priority of the ticket

Educate and Implement SLA into Workflow

SLA Standard:

1. Emergency - 4 hours
2. High Priority - 3 business days
3. Normal - 5 business days
4. Low - 10 business days

These are the SLA standard that has been set.

It is how long a ticket should take to be closed based on priority as soon as the ticket is created.

Educate and Implement SLA into Workflow

Ticket Number	Date Created	Due Date	SLA Due Date
111636	12/03/2021 09:57:00	12/03/2021 13:57:00	12/03/2021 13:57:00
111632	10/03/2021 16:21:00	15/03/2021 16:21:00	10/03/2021 20:21:00
111621	22/02/2021 12:08:00	23/02/2021 00:08:00	22/02/2021 16:08:00
111608	15/02/2021 11:41:00	15/02/2021 23:41:00	15/02/2021 15:41:00
111596	22/01/2021 10:58:00	22/01/2021 22:58:00	22/01/2021 14:58:00
111491	20/08/2020 09:36:00	20/08/2020 21:36:00	20/08/2020 13:36:00
111571	10/12/2020 09:35:00	10/12/2020 21:35:00	10/12/2020 13:35:00
111575	10/12/2020 09:59:00	10/12/2020 21:59:00	10/12/2020 13:59:00
111576	10/12/2020 10:04:00	10/12/2020 22:04:00	10/12/2020 14:04:00

This table displays the first 10 tickets shown in the dataset containing when the ticket was first created and the Due Date created along with the SLA Due Date.

They are all 'Emergency' priority.

This dataset shows that the initial Due Date create has no set standard and the Due Date is likely to be different in duration than the 4 hr SLA standard for 'Emergency' priority. Similarly, the case will likely be the same for the other priorities as well.

Educate and Implement SLA into Workflow

Example:

Enter Ticket Number:	111621
Subject	Public Ip Trusted Certificate Authority Error
Date Created	22/02/2021 12:08:00
Due Date	23/02/2021 00:08:00
Priority	Emergency
Type	Incident / Problem
Status	Closed
SLA Due Date	22/02/2021 16:08:00
Breached SLA	Yes

The date the ticket is created is 22/02/2021 12:08:00

SLA Due Date: 22/02/2021 16:08:00 - 4hrs after ticket is created

Breached SLA: Yes

Due Date: 23/02/2021 00:08:00 - Due date set by ticket (Not SLA standard)

Breach is likely due to following Ticket Due Date
